# Fueling

## [GCN - How to fuel for a 100 mile ride](#)

- Hourly carb intake can be anywhere from 30 to 90 grams per hour
  - 1-3 hours target 30 to 60 grams per hour
  - longer or harder rides target 60 to 90 grams per hour
- Starting with glycogen stored before the ride
  - We have 60 to 120 minutes of glycogen stored in muscles if you're well stocked.
- Hydration
  - Depends more on weather conditions
  - Hydration affects the ability to process fuel
- Reminders during a ride
  - Set alarms
