

TCP/IP Reset

WiFi adapter sees available network, however will not accept tcp/ip address. Attempting to reset winsock and ip stack may resolve the problem. Note, this information is one of many possible solutions that should only be attempted if you have a good working knowledge of the Windows OS network settings and services.

1. Open a command prompt using the Run As Administrator option.
2. Run the following commands individually in the listed order.

```
netsh winsock reset  
netsh int ip reset  
ipconfig /release  
ipconfig /renew  
ipconfig /flushdns
```
