Converting audio files for use in Asterisk

```
Resample a stereo wav into a mono 8000Hz 16 bit wav:
```

```
sox infile.wav -c mono -r 8000 -b 16 outfile.wav
```

```
Convert a properly formatted wav (8000Hz, 16bit mono) file to gsm:
```

```
sox infile.wav outfile.gsm
```

Converting mp3 to slin

```
mpg123 -w file.wav file.mp3
```

```
sox file.wav -t raw -r 8000 -s -2 -c 1 file.sln
```

Converting wav to slin

```
sox file.wav -t raw -r 8000 -s -2 -c 1 file.sln
```

Upgrading asterisk 1.4 to 1.6

```
NoOp updates
```

```
/NoOp
```

```
:%s/\\(NoOp,\\)\\(.*)$/NoOp(\\2)/  
sed -e 's/\\(NoOp,\\)\\(.*)$/NoOp(\\2)/*
```

```
pipe character to comma
```

```
:%s/|/,/g
```

```
ExecIf updates
```

```
/ExecIf
```

```
:%s/\\(ExecIf()\\($\\[.*\\]\\),\\(.*)\\,(.*)$/\\1\\2?\\3(\\4)/  
sed -e 's/\\(ExecIf()\\($\\[.*\\]\\),\\(.*)\\,(.*)$/\\1\\2?\\3(\\4)/*
```

```
Deprecated stuff - dialplan
```

```
grep -ir \  
-e SetCallerPres \  
-e WaitMusicOnHold \  
-e SetMusicOnHold \  
-e QUEUE_MEMBER_COUNT \  
-e Local \  
*
```

Faxing

Changes that can be made on the Brother MFC-8860DN to better optimize for using with VOIP.

Resolution press MENU/SET, 2, 2, 2, choose standard. Press MENU/SET, STOP,EXIT.

Baud (baud rate)/ECM press MENU/SET, 2, 0, 1, which is compatibility. Press up or down arrow to choose basic. Press MENU/SET, STOP/EXIT. This sets baud to 9600 and disables ECM.

Building

```
cd /usr/src/asterisk/mpg123-0.59r-gpl
make linux-x86_64 ; make install ; cd ..

cd /usr/src/asterisk/1.6.2.4

cd spandsp-0.0.6
./configure ; make install ; ldconfig ; cd ..

cd corosync-1.2.0
./configure ; make install ; cd ..

cd openais-1.1.2
./configure ; make install ; cd ..

cd dahdi-linux-2.2.1
make install ; cd ..

cd dahdi-tools-2.2.1
./configure ; make menuconfig ; make install ; make config ; make samples ; cd ..

cd libpri-1.4.10.2
make install ; cd ..

cd asterisk-1.6.2.4
./configure ; make menuconfig ; make install ; make samples ; make config ; cd ..

cd asterisk-addons-1.6.2.0
./configure ; make menuconfig ; make install ; make samples ; cd ..

cd ..
```

Simplify Asterisk 1.6 Dialplan Extensions

```
:%s/extension => .*,n/same => n/g
```

Sipura Distinctive Ring

```
exten => s,n,SIPAddHeader(Alert-Info: info=<Bellcore-r2>)
```

Available Distinctive Ring Patterns:

Pattern Name	Distinctive Ring Patterns
Bellcore-r1	60(2/4)
Bellcore-r2	60(.8/.4,.8/4)
Bellcore-r3	60(.4/.2,.4/.2,.8/4)
Bellcore-r4	60(.3/.2,1/.2,.3/4)
Bellcore-r5	1(.5/.5)
Bellcore-r6	60(.2/.4,.2/.4,.2/4)
Bellcore-r7	60(.4/.2,.4/.2,.4/4)
Bellcore-r8	60(0.25/9.75)

Available Distinctive Call Waiting Tone Patterns:

Pattern Name	Tone Pattern
Bellcore-r1	30(.3/9.7)
Bellcore-r2	30(.1/.1, .1/9.7)
Bellcore-r3	30(.1/.1, .1/.1, .1/9.7)
Bellcore-r4	30(.1/.1,.3/.1,.1/9.3)
Bellcore-r5	1(.5/.5)
Bellcore-r6	30(.1/.1,.3/.2,.3/9.1)
Bellcore-r7	30(.3/.1,.3/.1,.1/9.1)
Bellcore-r8	2.3(.3/2)

Using AWK to find individual calls

The below scripting will find all calls to the extension 11175 and print all the details for each call.

```
grep Dial /var/log/asterisk/full | grep macro-stdexten-v3 | grep "11175," | awk -F\[ '{print $3}' | awk -F\] '{print $1}' | while read x; do echo ""; echo ""; echo ""; echo "identifier: $x"; echo ""; echo ""; grep "\[$x\]" /var/log/asterisk/full; done
```

```
grep "Called .*11175" /var/log/asterisk/full | awk -F\[ '{print $3}' | awk -F\] '{print $1}' | while read x; do echo ""; echo ""; echo ""; echo "identifier: $x"; echo ""; echo ""; echo ""; grep "\[$x\]" /var/log/asterisk/full; done
```

```
grep "Called .*11175" /var/log/asterisk/full | awk -F\[ '{print $3}' | awk -F\] '{print $1}' | while read x; do echo ""; echo ""; echo "identifier: $x"; echo ""; echo ""; echo ""; grep "\[$x\]" /var/log/asterisk/full; done | grep -A 5 -e "Called .*11175"
```

Finding hung channels

Asterisk 1.4,1.6

```
asterisk -rx "core show channels concise" | awk -F ! '{print $1,$11}'
```

```
asterisk -rx "core show channels concise" | awk -F ! '{print $1,$11}' | while read x y; do if [ $y -gt 60 ] || [ $y -lt 0 ]; then echo "$x - `expr $y / 60` minutes `expr $y % 60` seconds"; fi ; done
```

Asterisk 1.2

```
asterisk -rx "show channels concise" | awk -F : '{print $1,$11}'
```

Asterisk and SystemD

[See here...](#)

Put the following in /etc/systemd/system/asterisk.service and then run "systemctl daemon-reload && systemctl enable asterisk"

```
[Unit]
Description=Asterisk PBX And Telephony Daemon
Wants=network.target
After=network.target
```

```

[Service]
Type=simple
User=root
Group=root
#Environment=HOME=/var/lib/asterisk
#WorkingDirectory=/var/lib/asterisk
ExecStart=/usr/sbin/asterisk -f -C /etc/asterisk/asterisk.conf
ExecStop=/usr/sbin/asterisk -rx 'core stop now'
ExecReload=/usr/sbin/asterisk -rx 'core reload'

LimitNOFILE=65535

# safe_asterisk emulation
Restart=always
RestartSec=10

[Install]
WantedBy=multi-user.target

```

Paste below into a terminal to setup the files:

```

cat << EOF > /etc/systemd/system/asterisk.service
[Unit]
Description=Asterisk PBX And Telephony Daemon
Wants=network.target
After=network.target

[Service]
Type=simple
User=root
Group=root
#Environment=HOME=/var/lib/asterisk
#WorkingDirectory=/var/lib/asterisk
ExecStart=/usr/sbin/asterisk -f -C /etc/asterisk/asterisk.conf
ExecStop=/usr/sbin/asterisk -rx 'core stop now'
ExecReload=/usr/sbin/asterisk -rx 'core reload'

LimitNOFILE=65535

```

```
# safe_asterisk emulation
Restart=always
RestartSec=10

[Install]
WantedBy=multi-user.target

EOF
```

Loading Dahdi

After some digging, for my purposes I found the best way to load the transcoding module is to use the systemd module loader to load the wctc4xxx transcoding module and UDEV to run dahdi_cfg once the module is loaded.

Prerequisite: Configure the /etc/dahdi/modules and /etc/dahdi/system.conf files as you normally would.

```
cat << EOF > /etc/dahdi/modules
# /etc/modules-load.d/dahdi is symlinked here so systemd will load it on startup
# /etc/udev/rules.d/dahdi-wctc4xxx.rules instructs udev to run dahdi_cfg after wctc4xxx module
is loaded

# Digium TC400B: G729 / G723 Transcoding Engine
wctc4xxx

EOF

ln -s /etc/dahdi/modules /etc/modules-load.d/dahdi.conf

# update udev to run dahdi_cfg after loading the transcoding module
cat << EOF > /etc/udev/rules.d/dahdi-wctc4xxx.rules
KERNEL=="wctc4xxx" RUN+=""/usr/sbin/dahdi_cfg"
EOF
```

The next time you reboot, systemd will load the module, udev will run dahdi_cfg, and then systemd will load asterisk. Granted this is only really needed if you haven't migrated away from MeetMe yet...

GROUP and GROUP_COUNT

func_GROUP

func_GROUP_COUNT

```
Set(GROUP(category)=groupname)
Set(CHECKING=${GROUP_COUNT(groupname@category)})
```

Example:

```
same => n,Set(GROUP(rcf)={`${CHANNEL(accountcode)}`)
same => n,Set(GROUP(rcf${RCF_DID})={`${CHANNEL(accountcode)})

same => n,Set(rcfCountAccountcode=${GROUP_COUNT(${CHANNEL(accountcode)}@rcf)})
same => n,Set(rcfCountDID=${GROUP_COUNT(${CHANNEL(accountcode)}@rcf${RCF_DID)})`)
```

Asterisk comparisons

```
same => n,ExecIf($["${testVariable}" = "SomeValue"]?Set(testvar=TRUE):Set(testvar=FALSE))

; Numerical comparisons require not using quotes
same => n,Set(count=5)
same => n,GofoIf($[$count} < 10]?trueTarget:falseTarget)

; Check if a variable is NOT NULL - This one will set testVariable2=TRUE
same => n,Set(testVariable1=something)
same =>
n,ExecIf($[!${LEN(${testVariable1})}]?Set(testVariable2=TRUE):Set(testVariable2=FALSE))

; Check if a variable is NOT NULL - This one will set testVariable2=FALSE
same => n,Set(testVariable1=)
same =>
n,ExecIf($[!${LEN(${testVariable1})}]?Set(testVariable2=TRUE):Set(testVariable2=FALSE))

; Multiple comparisons using AND (&)
same => n,ExecIf($["${testVariable1}" = "VALID" & "${testVariable2}" =
```

```
"VALID"]?set(status=TRUE))\n\n; Multiple comparisons using OR (|)\nsame => n,ExecIf("${testVariable1}" = "VALID" | "${testVariable2}" =\n"VALID"]?set(status=TRUE))\n\n\n; Providing only a false conditional path\nsame => n,Set(testVariable1=1)\n\nsame => n,GotoIf(${}:falseCondition)\n\nsame => n(trueCondition),NoOp(do something on true condition)\n\nsame => n,Hangup()\n\nsame => n(falseCondition),NoOp(do something on false condition)\n\nsame => n,Hangup()
```

[end]

Axis camera packet capture

Download network trace

[Source](#)

According to documentation this can be done via the URL below, as well as via the web interface in newer AXIS OS versions.

pcapdump URL

[Source](#)

1. Open any browser and paste the following URL:

`http://CA.ME.RA.IP/axis-cgi/debug/debug.tgz?cmd=pcapdump&duration=60`

(Substitute the "CA.ME.RA.IP" with the IP address of the device.)

2. The browser will ask for credentials. The default ones are: `root/pass`.
3. Once you enter the credentials, a download will start. It will last for `60` seconds. Note that the last part of the URL (`"duration="`) will determine the amount of time the capture will run — you can change this number as needed.
4. Once finished, the file will be usually saved to the computer's `Downloads` folder.

via the web interface

1. Open the camera's web interface.
2. Go to Settings -> System -> Maintenance

Batteries

Lithium Ion Voltage vs. Charge Status

[Original Source](#)

4.2V	- 100%
4.1V	- 87%
4.0V	- 75%
3.9V	- 55%
3.8V	- 30%
3.5V	- 0%

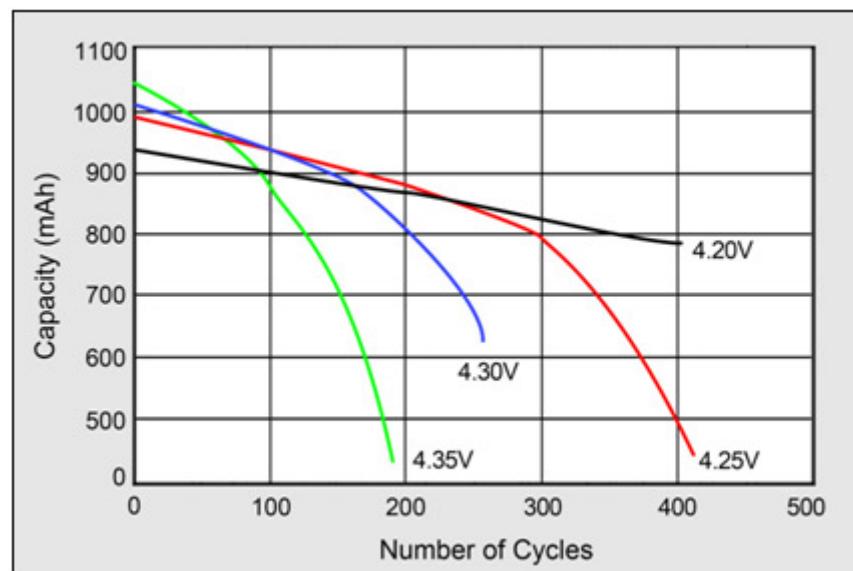

Somewhere in the 3.9V or slightly below area would be ideal for storage. Just don't overdo it. I believe AW batteries generally ship about 40% charge, or you can just discharge them in a light or other device, since that is easy and safe.

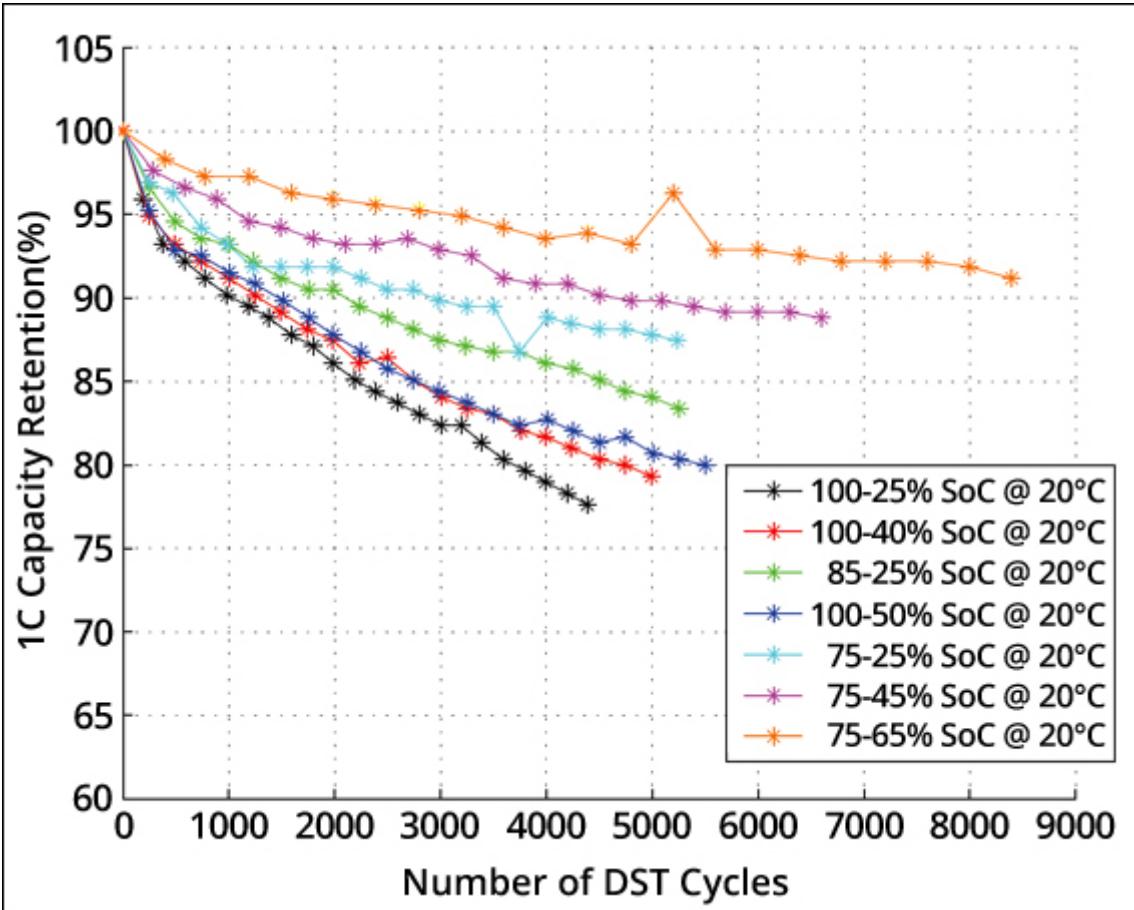

Battery University

Below are links to and summaries of some very informative Battery University articles.

BU-808: How to Prolong Lithium-based Batteries

[Original Source](#)

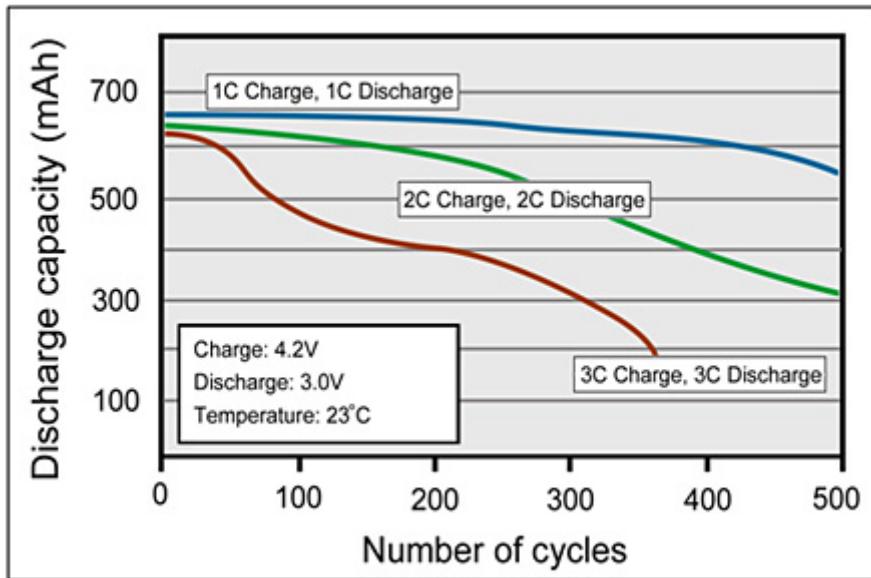

Summary:

- Environmental conditions, not cycling alone, govern the longevity of lithium-ion batteries. The worst situation is keeping a fully charged battery at elevated temperatures. Battery packs do not die suddenly, but the runtime gradually shortens as the capacity fades.
- Lower charge voltages prolong battery life and electric vehicles and satellites take advantage of this. Similar provisions could also be made for consumer devices, but these are seldom offered; planned obsolescence takes care of this.
- A laptop battery could be prolonged by lowering the charge voltage when connected to the AC grid. To make this feature user-friendly, a device should feature a “Long Life” mode that keeps the battery at 4.05V/cell and offers a SoC of about 80 percent. One hour before traveling, the user requests the “Full Capacity” mode to bring the charge to 4.20V/cell.

BU-401a: Fast and Ultra-fast Chargers

[Original Source](#)

Summary

- Charging and discharging Li-ion above 1C reduces service life. Use a slower charge and discharge if possible. This rule applies to most batteries.
- All batteries perform best at room temperature and with a moderate charge and discharge. Such a sheltered lifestyle does not always reflect real-world situations where a compact pack must be charged quickly and deliver high currents. Such typical applications are drones and remote control devices for hobbyists. Expect a short cycle life when a small pack must give all it has.

-end

NodeJS

Process Management

OpenVPN

Integrating OpenVPN with RADIUS

Below is the culmination of at least a month working with OpenVPN.

I recently discovered a bug in the Mikrotik OpenVPN server implementation that prevents users from being informed that they entered invalid credentials. (This bug was resolved in RouterOS 7.4.) The project I'm working on requires Azure MFA be part of the equation for VPN authentication. Azure ADDS will lock a user account after three failed authentication attempts. Because of this Mikrotik bug, a user who accidentally mistypes a password has about nine seconds before Azure ADDS locks there account.

I submitted a bug report to Mikrotik, but as much as I am a Mikrotik fanboy, I know they're not going to fix it anytime soon (which they surprisingly did in RouterOS 7.4, but didn't back-port the fix into the ROS v6 release tree.) I can't be the first person to inform them of this bug, and their OpenVPN Server has always left much to be desired and not gotten much attention from them, so I don't expect it to be resolved anytime soon. I also wasn't about to deploy a VPN solution to a user base that was going to be constantly resulting in calls to the helpdesk because of account lockouts.

I wanted to use the Mikrotik router because its very easy to implement firewall policies that are based on the user's group returned from RADIUS.

The goal of this exercise was learning how to integrate RADIUS authentication with MFA PUSH requirements and be able to service similar group based firewall policies.

I have not yet gotten around to the firewall policies implementation, but I do have a good idea of how it can be done.

The configuration below uses the following authentication strategies:

- Private CA created with EasyRSAv3, complete with CRL distribution endpoints. This is not detailed here.
- The Private CA was created an an Intermediate CA signed by another well used CA that I did not want to use for client certificates.
- Server certificates generated by the above Private CA
- User certificates generated by the above Private CA
- The following factors are required for a successful login:
 - A valid user certificate. The CN must match the username of the person logging into the OpenVPN server.
 - Username and password supplied by the user is authentication against a RADIUS server.

- Using RADIUS allows any number of 2FA/MFA solutions to be leveraged for a third factor such as an MFA PUSH notification via Azure MFA or DUO.
- The OpenVPN radius plugin does not support radsec, so radsecproxy was also used to provide secure RADIUS queries across the Internet to redundant cloud hosted servers.

If you know what you're doing, you can use the configs and scripts listed below to implement the same solution. ☐

Installing OpenVPN and the OpenVPN plugin in Ubuntu

```
apt -y install openvpn openvpn-auth-radius

mkdir -p /etc/openvpn/client /etc/openvpn/server /etc/openvpn/server-ccd
```

/etc/openvpn/server/server.conf

```
server 192.168.168.0 255.255.255.0
proto udp
port 1194
dev tun1
topology subnet

;user nobody
;group nogroup

cipher AES-256-GCM
auth SHA256

management 127.0.0.1 61194 /etc/openvpn/server/pw-file

duplicate-cn

OpenVPNConfig=/etc/openvpn/server/server.conf  
  
  
# Support for topology option in OpenVPN 2.1  
# If you don't specify anything, option "net30" (default in OpenVPN) is used.  
# You can only use one of the options at the same time.  
# If you use topology option "subnet", fill in the right netmask, e.g. from OpenVPN option "--  
server NETWORK NETMASK"  
subnet=255.255.255.0  
# If you use topology option "p2p", fill in the right network, e.g. from OpenVPN option "--  
server NETWORK NETMASK"  
# p2p=10.8.0.1  
  
  
# Allows the plugin to overwrite the client config in client config file directory,  
# default is true  
overwriteccfiles=true
```

```

# Allows the plugin to use auth control files if OpenVPN (>= 2.1 rc8) provides them.
# default is false
useauthcontrolfile=true

# Path to a script for vendor specific attributes.
# Leave it out if you don't use an own script.
#vsascript=/etc/openvpn/server/vsascript.pl

# Path to the pipe for communication with the vsascript.
# Leave it out if you don't use an own script.
#vsanamedpipe=/tmp/vsapipe

# A radius server definition, there could be more than one.
# The priority of the server depends on the order in this file. The first one has the highest
priority.

server
{
    acctport=1813
    authport=1812
    retry=0
    wait=30
    name=127.0.0.1
    sharedsecret=ChangeMe
}

```

/etc/openvpn/server/script-auth-user-pass-verify

The script below is used currently to make sure that the username and the user certificate name match, otherwise, deny the login request.

Unfortunately, OpenVPN runs the RADIUS plugin in a different thread, so if you're using RADIUS to do PUSH notifications to Azure MFA, DUO, Okta, etc., the user will most likely receive a PUSH notification if they have entered correct credentials, even though there may be a certificate mismatch since these two processes are running in parallel.

```

#!/bin/bash
DUMPFFILE=/var/log/openvpn/dump.all

echo "script-auth-user-pass-verify" >> $DUMPFFILE
date >> $DUMPFFILE

```

```

echo "======" >> $DUMPFIELD
for arg in "$@"; do
    echo "ARG: $arg" >> $DUMPFIELD
done
echo "======" >> $DUMPFIELD
env >> $DUMPFIELD
echo "======" >> $DUMPFIELD
echo "Pulled from environment:" >> $DUMPFIELD
echo "common_name: $common_name" >> $DUMPFIELD
echo "username: $username" >> $DUMPFIELD
if [ "$common_name" = "$username" ]; then
    echo "Names match!!! Allowing connection!"
    echo "======" >> $DUMPFIELD
    echo "" >> $DUMPFIELD
    echo "" >> $DUMPFIELD
    echo "" >> $DUMPFIELD
else
    echo "$untrusted_ip:$untrusted_port script-auth-user-pass-verify: common_name and
username do not match... denying connection!!!"
    echo "common_name and username do not match... denying connection!!!!" >> $DUMPFIELD
    echo "======" >> $DUMPFIELD
    echo "" >> $DUMPFIELD
    echo "" >> $DUMPFIELD
    echo "" >> $DUMPFIELD
    exit 1
fi

```

/etc/openvpn/server/script-client-connect

This script doesn't do anything currently but log available environment variables to the dump.all file. It can be used to push additional configuration details to the OpenVPN server for the user that is logging in.

```

#!/bin/bash
DUMPFIELD=/var/log/openvpn/dump.all

echo "script-client-connect" >> $DUMPFIELD
date >> $DUMPFIELD
echo "======" >> $DUMPFIELD
for arg in "$@"; do
    echo "ARG: $arg" >> $DUMPFIELD

```

```
done
echo "======" >> $DUMPFILE
env >> $DUMPFILE
echo "======" >> $DUMPFILE
echo "" >> $DUMPFILE
echo "" >> $DUMPFILE
echo "" >> $DUMPFILE
```

OpenVPN Connect Client - Profile Update

The latest versions of OpenVPN Connect deprecated a few configuration options. The following configuration option that was previously acceptable has been deprecated and needs to be changed to the two separate options. If using udp instead of tcp, just change the options appropriately.

```
proto tcp-client

# needs to be changed to

client
proto tcp
```

#end

Polycom

Polycom SIP TLS with custom CA

The config files below show how to add a custom CA certificate (customCaCert1) to a Polycom phone for use with SIP TLS registration.

file: ca.cfg

```

Project: Teensy Climate

The primary purpose of this project was to give me a reason to learn how to develop solutions using the Atmel AVR 8-bit microcontrollers.

The secondary purpose of this project is to develop a climate control system for the home.

Current Project Status

4 Dec 2014:

Really haven't done anything with this project since the last update primarily because I wasn't finding a decent relay module for the fan attic fan controls easily enough. Earlier this week someone showed me the [SainSmart relay modules](#). They just came in today. Hopefully I'll get to play with soon and get them integrated into the project. The ultimate goal of this project was to have a device automatically control the attic fan during the sprint, summer and autumn months. With these boards I now see a light at the end of the tunnel.

30 July 2011:

The code has been cleaned up a little bit (you should have seen versions 0.1-0.4!!!!).

While I am using the uthash library, I know I'm not using it properly, but it works. While I wanted to implement a hash table, it's pretty much just creating a linked list for me and I'm iterating the list in various places. I've tried implementing a standard linked list using pointers (in version 0.6) but it's not working properly. The sensor objects are being created with the proper hardware addresses in each location, but the temperature readings are not being stored right, which is just strange. So for now I'm continuing to eat up some extra memory while I use the uthash library.

I'm trying to determine the best relay setup to use to control the attic fan. I guess I just need to get over it and by a \$15-20 120-240V relay and be done with it.

To Date min's, max's and observations

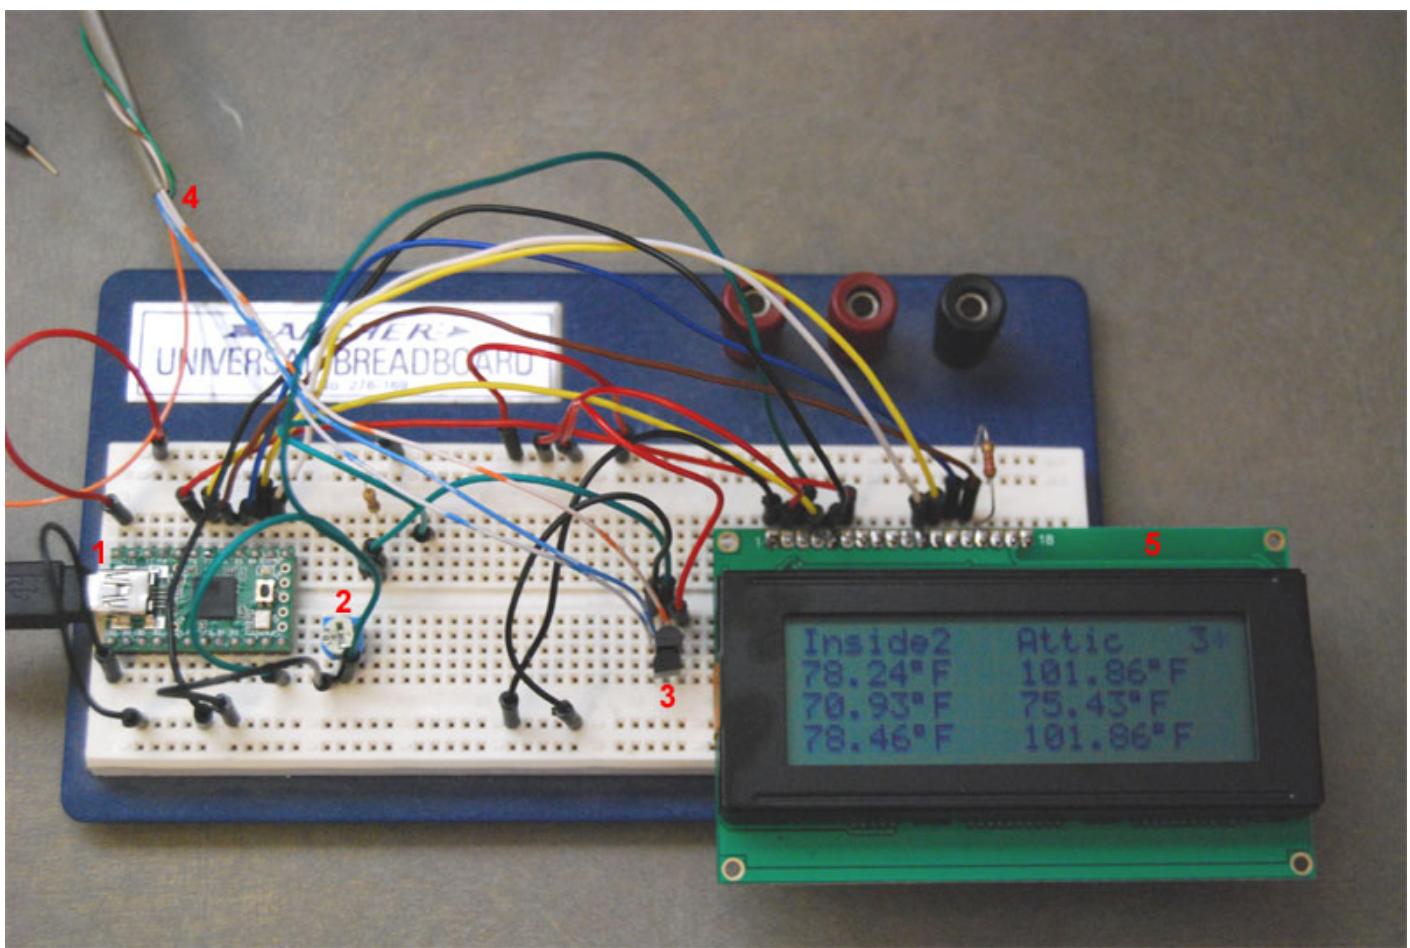

- 7/31/2011 14:11:16 - Max 131.67 @ Attic
- 8/3/2011 14:58:15 - Max: 135.16 @ Attic
- 1/16/2024 - Even though the outdoor temp was in the teens, the attic temp never dipped below freezing

- 1/21/2024 - Pending

Development Photos

Breadboarded project

1. [Teensy 2.0 Development Board](#)
2. LCD Contrast Potentiometer (10k)
3. [DS18B20 Programmable Resolution 1-Wire Digital Thermometer](#): two on board and one in attic
4. CAT3 extending 1-Wire bus to sensor in attic
5. [HD44780 compatible LCD display](#)

Serial console extended stats

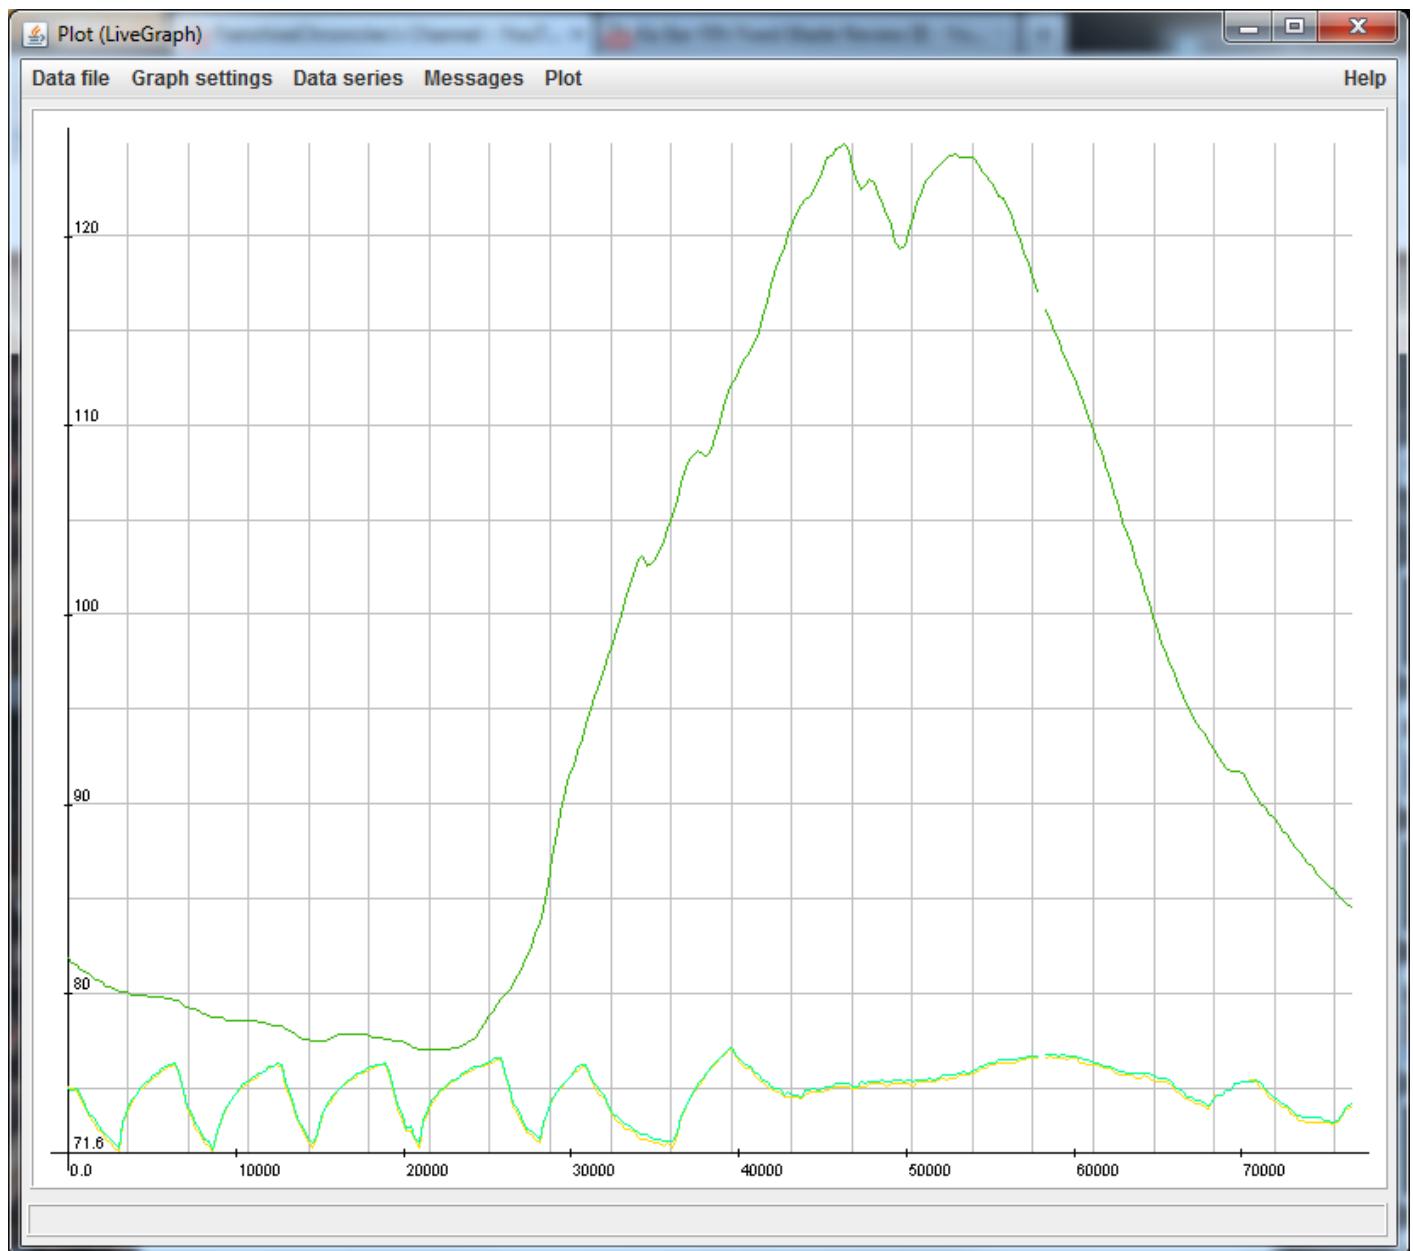

```
COM4 - PuTTY
8/1/2011 22:29:07 (Uptime: 268 s) (li: 5014503) (lld: 0 ms)
Global Min: 74.64 @ 8/1/2011 22:25:07 (Inside1)
Global Max: 80.15 @ 8/1/2011 22:25:18 (Attic)

Current list of sensors:
28:39:44:5b:03:00:00:3b Location: Inside2 (crcerrors: 0 ) (lis: 14614)
    Last: 74.75 @ 8/1/2011 22:29:06
    Min: 74.64 @ 8/1/2011 22:25:07
    Max: 75.43 @ 8/1/2011 22:26:16
28:db:32:5b:03:00:00:8d Location: Attic (crcerrors: 0 ) (lis: 14614)
    Last: 80.15 @ 8/1/2011 22:29:06
    Min: 80.04 @ 8/1/2011 22:25:07
    Max: 80.15 @ 8/1/2011 22:25:18
28:b7:4b:5b:03:00:00:ad Location: Inside1 (crcerrors: 0 ) (lis: 14614)
```

Serial console CLI options

```
COM4 - PuTTY
Max: 105.80 @ 7/30/2011 10:57:36
28:b7:4b:5b:03:00:00:ad Location: Inside1 (crcerrors: 2 ) (lis: 15881)
Last: 75.43 @ 7/30/2011 10:58:34
Min: 71.15 @ 7/30/2011 2:28:32
Max: 78.57 @ 7/30/2011 10:22:10

CLI Options:
B:      jump to bootloader
c/C:    clear sensors extended stats
d/D:    toggle lcd display contents
e/E:    toggle the display of extended stats
f/F:    show current free memory
h/H:    display this help
t/T:    time sync via console
?:     display this help
```

Graphed data from 8 Aug 2011 (dark green is attic temperature, others are inside temperature)

The CLI was updated to export data using a CSV format (millis,now(),each sensors last conversion...). A Python script was written to read the text from the serial interface and write it to a file. [LiveGraph](#) was used to read the file in real time and display the graphed data. The graph above begins at about 11:30 PM 7 Aug 2011 and ends about 11:30 PM 8 Aug 2011. One sample is output to the CLI every second. After roughly a 24 hour period the CSV file was 2.69MB in size.

Version

The current version is 0.5c.

Features

As of 0.5c (1 Aug 2011):

- Global min/max with sensor name and timestamps

As of 0.5b (30 July 2011):

- Dynamic sensor discovery on device power on
- Per sensor last/min/max temperatures with timestamps
- Non-blocking temperature conversions
- Sensor data display on LCD (currently limited to the first two sensors)
- Sensor data display on serial console (basic and extended)
- Serial console control
- Time update via serial console

To Do

- Air Conditioner Filter Change Reminder
- Attic fan relay control
- EEPROM storage of configuration information
- Ethernet TCP/IP Interface using [WizNet WIZ812MJ module](#)
- Historical statistics other than just current/min/max
 - avg/min/max per day
 - long term five minute interval graphing (via external means, SNMP possible)
- Keypad for complete device control
- PCB design
- Final migration from breadboard to PCB

```

Couldn't find my previous Python script so I had to crank out a new one quickly.

```

# Python 3.12 venv setup
mkdir -p ~/dev/python/python-teensyclimate-interface
cd ~/dev/python/python-teensyclimate-interface
python3.12 -m venv ven
source ./venv/bin/activate
pip install pyserial

```

```

# file:teensyclimate-log.py
# MSHARP 20240115
# 1. Open serial port
# 2. Write time sync string to serial port
# 3. Start logging data to console
# Intent is to SSH into remote machine connected to microcontroller
# and log the session output to another computer, say via PuTTY

```

```
import serial
import time

# open serial port
teensy = serial.Serial('/dev/ttyACM0', 115200, timeout=3)

# send time sync command with time data
timeSyncString = "@"+str(time.time())[0:10]
print(str(f"Writing time sync string {timeSyncString} to serial port..."))
teensy.write(f'T'.encode())
teensy.write(f'{timeSyncString}'.encode())

print(f'Response:')

# loop to read responses from serial port
while True:
    try:
        line = teensy.readline()
        if (line != ""):
            print(line.rstrip().decode())
    except KeyboardInterrupt:
        print()
        print("CTRL-C received")
        break;

print("Shutting down...")
teensy.close()
```

#end

[Configuration Example](#)

Configuration Options

```
# Note that some block option values may reference a block by name, in which case the block
name must be previously defined. Hence the order of the blocks may be significant.

# Recommended block order:
#   tls
#   rewrite
#   client
#   server
#   realm

# The rewrite actions are performed in this sequence:
# ① RemoveAttribute (or WhitelistAttribute)
# ② ModifyAttribute
# ③ SupplementAttribute
# ④ AddAttribute

#
rewrite name {
    AddAttribute attribute:value
    AddVendorAttribute vendor:subattribute:value
    SupplementAttribute attribute:value
    SupplementVendorAttribute vendor:subattribute:value
    ModifyAttribute attribute:/regex/replace/
    ModifyVendorAttribute vendor:subattribute:/regex/replace/
    RemoveAttribute attribute
    RemoveVendorAttribute vendor[:subattribute]
    WhitelistMode (on|off)
    WhitelistAttribute attribute
```

```
    WhitelistVendorAttribute vendor[:subattribute]
}

tls name {
    CACertificateFile file
    CACertificatePath path
    CertificateFile file
    CertificateKeyFile file
    CertificateKeyPassword password
    PolicyOID oid
    CRLCheck (on|off)
    CacheExpiry seconds
}

client (name|fqdn|(address[/length])) {
    Host (fqdn|(address[/length])) # multiple lines allowed
    IPv4only (on|off)
    IPv6only (on|off)
    Type type (UDP|TCP|TLS|DTLS)
    Secret secret
    TLS tls
    CertificateNameCheck (on|off)
    matchCertificateAttribute ( CN | SubjectAltName:URI | SubjectAltName:DNS ) :/regexp/
    MatchCertificateAttribute SubjectAltName:IP:address
    DuplicateInterval seconds
    AddTTL 1-255
    TCPKeepalive (on|off)
    FticksVISCOUNTRY cc
    FticksVISINST institution
    RewriteIn rewrite
    RewriteOut rewrite
    RewriteAttribute User-Name:/regex/replace/
}

server (name|((fqdn|address)[:port])) {
    Host (fqdn|address)[:port]
    Port port
    DynamicLookupCommand command
    StatusServer (on|off|minimal|auto)
    RetryCount count
```

```

    ↵RetryInterval interval

    ↵IPv6Only (on|off)
    ↵Type type
    ↵Secret secret
    ↵TLS tls
    ↵CertificateNameCheck (on|off)
    ↵matchCertificateAttribute ( CN | SubjectAltName:URI | SubjectAltName:DNS ) :/regexp/
    ↵MatchCertificateAttribute SubjectAltName:IP:address
    ↵AddTTL 1-255
    ↵TCPKeepalive (on|off)
}

realm (*|realm|/regex/) {
    ↵Server server
    ↵AccountingServer server
    ↵AccountingResponse (on|off)
    ↵ReplyMessage message
}

```

Configuration framework

Create the folders and files first:

```

mkdir /etc/radsecproxy.d

touch /etc/radsecproxy.d/tls.conf
touch /etc/radsecproxy.d/rewrites.conf
touch /etc/radsecproxy.d/clients.conf
touch /etc/radsecproxy.d/servers.conf
touch /etc/radsecproxy.d/realms.conf

chown -R radsecproxy:radsecproxy /etc/radsecproxy.*

```

```
chmod 770 /etc/radsecproxy.d  
chmod 660 /etc/radsecproxy.conf /etc/radsecproxy.d/*.conf
```

Now populate the files as needed:

```
# /etc/radsecproxy.conf  
  
IPv4Only          on  
  
ListenUDP        *:1812  
ListenUDP        *:1813  
ListenTLS         *:2083  
  
# For testing later reduce to 3  
LogLevel          4  
  
#LogDestination   file:///var/log/radsecproxy.log  
LogDestination    x-syslog:///br/>LoopPrevention    on  
  
Include /etc/radsecproxy.d/tls.conf  
Include /etc/radsecproxy.d/rewrites.conf  
Include /etc/radsecproxy.d/clients.conf  
Include /etc/radsecproxy.d/servers.conf  
Include /etc/radsecproxy.d/realms.conf
```

```
# file:tls.conf  
  
tls default {  
    CACertificateFile /etc/radsecproxy.d/certs/trusted-roots.crt  
    CertificateFile  /etc/radsecproxy.d/certs/certificate.crt  
    CertificateKeyFile /etc/radsecproxy.d/certs/certificate.private.key  
  
    CRLCheck off  
    #CacheExpiry 3600  
    #policyOID      1.3.6.1.5.5.7.3.2  
}
```

```

# file:rewrites.conf

Software

Below are links to various software I use. Software is free / open-source unless otherwise noted.

Unclassified

- [draw.io](#) - diagram / flow charting
- [PlantUML plugin for Visual Studio Code](#) (jebbs) - building sequence diagrams
- [SimpleMind](#) - Mind Mapping - \$\$\$
- [WinMerge](#) - an Open Source differencing and merging tool for Windows. Use for comparing both folders and files.

Cygwin - Additional components to install

- [aria2](#) - Download utility for HTTP/HTTPS, FTP, BitTorrent and Metalink
- autossch
- openssh
- unzip
- vim
- zip

File Encryption

- [AES Crypt](#)

File Management

- [7-Zip](#)
- [grepWin](#)

File Sync

- [SyncFolders](#) - Synchronize or backup your files and folders
- [Cyberduck](#) - libre server and cloud storage browser

Database Clients

- [HeidiSQL](#) - client for MariaDB, MySQL, Microsoft SQL, PostgreSQL and SQLite

Disk Usage Utilities

- [JDiskReport](#)
- [Filelight](#)
- [Space Sniffer](#)
- [WinDirStat](#)

Graphics Editing

- [paint.net](#)
- [the gimp](#)

Network tools - clients

- [MobaXterm](#) - RDP/SSH/Telnet client - free / \$\$\$
- NTRadPing - radius client
- [PuTTY](#) - SSH/Telnet client
- [TightVNC](#) - VNC client/server
- [UltraVNC](#) - VNC client/server
- [WinSCP](#)

Network tools - configuration

- [Simple IP Config](#) - Windows network interface configuration tool - eases changing interface IP address configurations

Network tools - packet capture

- [Microsoft Network Monitor 3.4 \(archive\)](#)
- [Wireshark](#) - Packet capture software

Network tools - scanning

- [Advanced IP Scanner](#)
- [Angry IP Scanner](#)
- [Nmap](#)

Screen Capture / Annotation

- [Greenshot](#)
- [ShareX](#) - Screen capture, file sharing and productivity tool

Text / Code Editors

- [neovim](#) - hyperextensible Vim-based text editor
- [notepad++](#)
 - [notepadqq](#) is a notepad++ like editor for the Linux desktop.
- [vim](#) - a highly configurable text editor built to make creating and changing any kind of text very efficient
- [visidata](#) - VisiData is an interactive multitool for tabular data (CSV included) written in Python
- [Visual Studio Code](#)

Markdown Editors

- [Editor.md](#) - Open source online Markdown editor for use in embedded JS applications
- [Obsidian](#) - Open source Evernote replacement you sync yourself
 - Better than Evernote without the syncing, not as good as Notion.so, but free
- [Typora](#) - Not FOSS, but inexpensive and really nice Markdown editor

Programming / Scripting

- [Node.js](#)
- [Python](#)
- [rust](#)

Video Capture and Editing

- [DaVinci Resolve](#)
- [OBS](#)
- [OpenShot](#)

VPN Clients

- OpenVPN Connect - [Windows](#) / [macOS](#) / [Linux](#)
- [WireGuard](#)

Windows Registry Tools

- [Nirsoft RegistryChangesView](#)

Windows Shell Add-Ons

- [Nilesoft Shell](#) - I've stopped using this due to certain issues.

Ubiquiti UniFi

List users in the UniFi Controller database

```
# show list of users in the unifi mongodb database
mongo --port 27117 ace --eval "db.admin.find().forEach(printjson);"
```

Change password for a UniFi Controller user

```
# change <UserName> to an actual user on the unifi controller
# the command will reset that user password to 'password'
mongo --port 27117 ace --eval 'db.admin.update( { "name" : "<UserName>" }, { $set : {
  "x_shadow" :
  "$6$GgQYRQnUs4wYkRd$7g6mig.les9salut9CZjUrG/UqqF6R/2RiCaCQEpEzz/7UtAtzeeQsVDnacAW1el2KH/jvUuJ4
  Eh08xy.KGl0/" } } )'
```

[Decrypt a UniFi Controller backup](#)

Force dhcp to renew ip address

1. Get the PID of the udhcpc process
2. Send that process the USR1 signal which tells udhcpc to renew its IP address ☰

```
# find the PID of the udhcpc process
ps | grep udhcpc
```

```
# output of the above command
4052 admin      3480 S      /sbin/udhcpc -f -i eth0 -V ubnt -A 10 -s /etc/udhcpc/udhcpc -p
/var/run/udhcpc.eth0.pid
6648 admin      3504 R      sh /usr/etc/syswrapper.sh ssh-trace-cmd -c ps | grep udhcpc -n 4 -i
6650 admin      3480 R      grep udhcpc
```

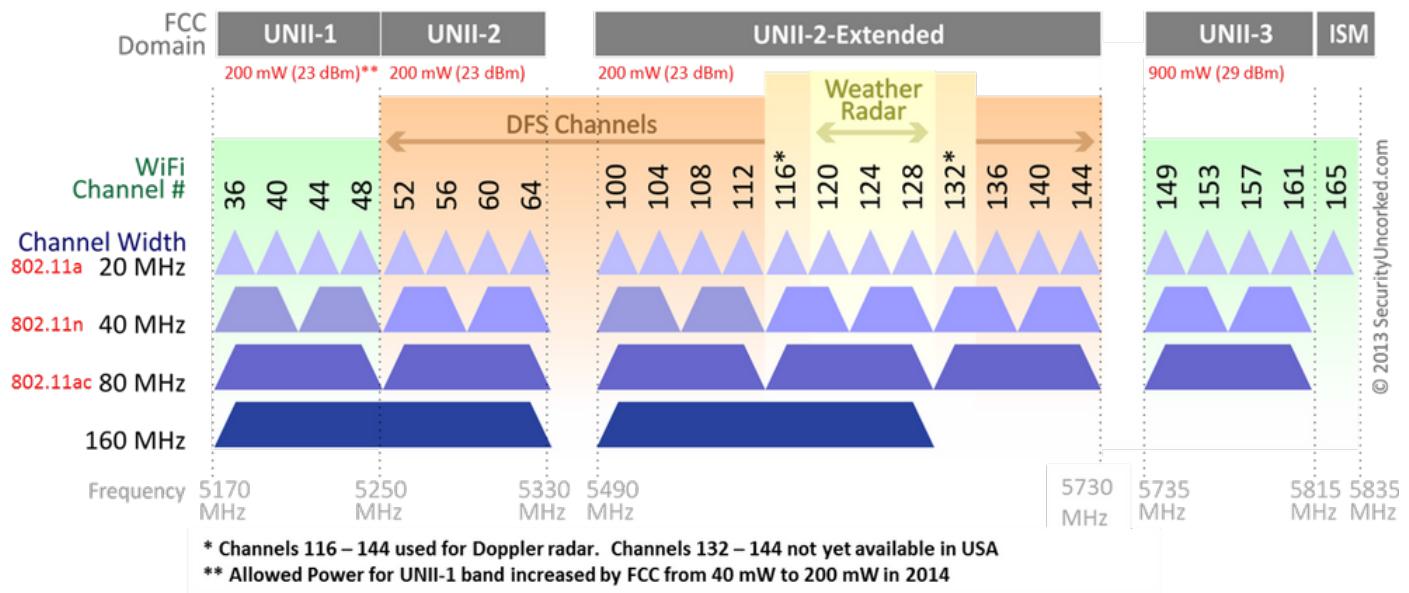

```
# instruct udhcpc to renew its IP address by sending it's process the USR1 signal
kill -USR1 4052
```

:end

WiFi Regulatory Notes

More notes to come. For now, these are random useful illustrations from around the web.

802.11ac Channel Allocation (N America)

		Center Freq (MHz)	802.11a (20 MHz)	802.11n (40 MHz)	802.11ac (80 MHz)	802.11ac (160 MHz)

WireGuard

Generic client template

```
[Interface]
PrivateKey = xxx
Address = 192.168.170.X/24

[Peer]
PublicKey = yyy
PreSharedKey = zzz
AllowedIPs = 10.0.0.0/8, 172.16.0.0/12, 192.168.0.0/16
Endpoint = router.domain.com:13231
PersistentKeepalive = 25
```

Ubuntu client setup using systemd

```
# create and store the local private key
wg genkey | sudo tee /etc/wireguard/private.key
sudo chmod go= /etc/wireguard/private.key

# create and store the related public key
sudo cat /etc/wireguard/private.key | wg pubkey | sudo tee /etc/wireguard/public.key

# create and store an additional preshared key
wg genpsk | sudo tee /etc/wireguard/psk
```

```
WGPRIVKEY=`cat /etc/wireguard/private.key`
WGPSK=`cat /etc/wireguard/psk`

cat << EOF >> /etc/wireguard/wg0.conf
[Interface]
PrivateKey = ${WGPRIVKEY}
Address =

[Peer]
```

```
PublicKey =
PreSharedKey = ${WGPSK}
AllowedIPs = 10.0.0.0/8, 172.16.0.0/12, 192.168.0.0/16
Endpoint = router.domain.com:13231
PersistentKeepalive = 25
EOF
```

```
sudo vi /etc/wireguard/wg0.conf
```

```
# enable and start the wg0 interface using the wg-quick service
sudo systemctl enable wg-quick@wg0.service
sudo systemctl start wg-quick@wg0.service
```

Using post-up and post-down scripts in a WireGuard configuration

You can use PostUp and PostDown scripts to run PowerShell commands to manage Name Resolution Policy Table (NRPT) rules when a WireGuard tunnel connects and disconnects.

```
[Interface]
PostUp = powershell.exe -Command "& { Add-DnsClientNrptRule -Comment 'wg-tunnel-xxx' -Namespace '.xxx.net' -NameServers 172.16.16.254 }"
PostDown = powershell.exe -Command "& { Get-DnsClientNrptRule | where Comment -eq 'wg-tunnel-xxx' | foreach { Remove-DnsClientNrptRule -Name $_.Name -Force } }"
```

You will need to enable the ability to run scripts through the addition of the DangerousScriptExecution key:

```
# run the following command using PowerShell running as Administrator
reg add HKLM\Software\WireGuard /v DangerousScriptExecution /t REG_DWORD /d 1 /f
```

Reference: [adminregistry.md](#)

ProFTPD

ProFTPD and SFTP

Ubuntu 22.04

1. Install proftpd-basic
2. Edit /etc/proftpd/modules.conf and enable mod_sftp and mod_sftp_pam
3. Edit /etc/proftpd/sftp.conf (see example below)
4. Edit /etc/proftpd/proftpd.conf and enable the sftp.conf include
5. Create sftproot folders in user home directories as needed (based on the configuration shown below)
6. You should be ready to rock and roll!

```
# mod_sftp is part of proftpd-basic, not proftpd-core
apt install proftpd-basic
```

```
<IfModule mod_sftp.c>
SFTPEngine      on
Port            2222
SFTPLog         /var/log/proftpd/sftp.log
#
# Configure all host keys, using the same host key
# files that OpenSSH uses.
#
SFTPHostKey    /etc/ssh/ssh_host_rsa_key
SFTPHostKey    /etc/ssh/ssh_host_dsa_key
SFTPHostKey    /etc/ssh/ssh_host_rsa_key
SFTPHostKey    /etc/ssh/ssh_host_ecdsa_key
SFTPHostKey    /etc/ssh/ssh_host_ed25519_key

#SFTPAuthMethods publickey
#SFTPAuthMethods keyboard-interactive
SFTPAuthMethods publickey keyboard-interactive
SFTPAuthorizedUserKeys file:/etc/proftpd/authorized_keys/%u

#
# Use either
```

```
#      ssh-keygen -e -f ~user/.ssh/id_rsa.pub >/etc/proftpd/authorized_keys/user
# or
#      ssh-keygen -e -f ~user/.ssh/authorized_keys >/etc/proftpd/authorized_keys/user
# to convert users public keys in RFC4716 format.
#
#
# Enable compression
#
#SFTPCompression delayed

# Other desired configuration options
DefaultRoot ~/sftproot
RequireValidShell off

# Limit logins to only a specific group
<Limit LOGIN>
    AllowGroup sftponly
    DenyAll
</Limit>

</IfModule>
```

```
#end
```

Bind9

Recursion without recursion to enable forward zones

Problem

I need to add a forward zone to an authoritative bind9 server, but forward zones don't appear to work with recursion disabled, and I don't want to turn this server into an open resolver.

Solution

Turn the server into an open resolver, but delete all of the root hints so it doesn't have anywhere to lookup from, and make sure you don't have forwarders specified under options {}

```
options {  
    ...

Upgrade paths

[Click here](#) to view the required upgrade paths. Use the commands below to perform the individual upgrades.

Upgrade to a specific version using the official repositories

[source](#)

Use the first command

```
# Ubuntu/Debian
sudo apt-cache madison gitlab-ee
```

```
# Ubuntu/Debian
sudo apt install gitlab-ee=<version>
```

Example staged upgrade:

```
apt install gitlab-ee=14.10.5-ee.0
apt install gitlab-ee=15.0.5-ee.0
apt install gitlab-ee=15.1.6-ee.0
apt install gitlab-ee=15.4.6-ee.0
apt install gitlab-ee=15.11.12-ee.0
```

PoE Detection and Negotiation

Virtual disk format conversions

qemu-img utility

You can download the [qemu-img utility for Windows from here](#).

OVA to VHDX

```
qemu-img.exe -p convert source.vmdk -O vhdx -o subformat=fixed destination.vhdx
```

#end

WiFi Standards

WiFi Standards Comparison

	WiFi 4	WiFi 5	WiFi 6	WiFi 6e	WiFi 7
Launch date		2013	2019	2021	2024
Standard name		802.11ac	802.11ax	802.11ax	802.11be
Notable additions		MU-MIMO	OFDMA TWT WPA3 Encryption + modulation +		MLO +Modulation +Max channel width
Power and battery life		-	Supports TWT		
Security protocols		WPA, WPA2	WPA, WPA2, WPA3 (OWE)		
Modulation		up to 256-QAM	up to 1024-QAM		up to 4096-QAM
Beamforming		up to four antennas	up to eight antennas		
Subcarriers (Resource units)		-	Supports OFDMA	OFDMA	OFDMA
Multi-RU		-	No	No	Yes
MIMO	Added				
MU-MIMO		up to 4x4 downlink unidirectional	up to 8x8 bidirectional	up to 8x8 bidirectional	up to 16×16 bidirectional
MLO (Multi-Link Operation)		-	-	-	Yes
Frequency bands		2.4 GHz, 5 GHz	2.4 GHz, 5 GHz	2.4 GHz, 5 GHz, 6 GHz	2.4 GHz, 5 GHz, 6 GHz
Channel width		20, 40, 80, 80+80, 160 MHz	Same	Same	Up to 320 MHz
BSS coloring		-	Yes		

Latency			Reduced if all devices using the network are WiFi 6 and above, due to the above features.		
---------	--	--	---	--	--

MIMO (multiple-input and multiple-output)

Aka single-user MIMO.

Leverages spatial multiplexing, or space-division multiplexing, used to transmit independent channels separated in space.

In wireless communications, each spatial stream is serviced by...

MU-MIMO (multi-user MIMO)

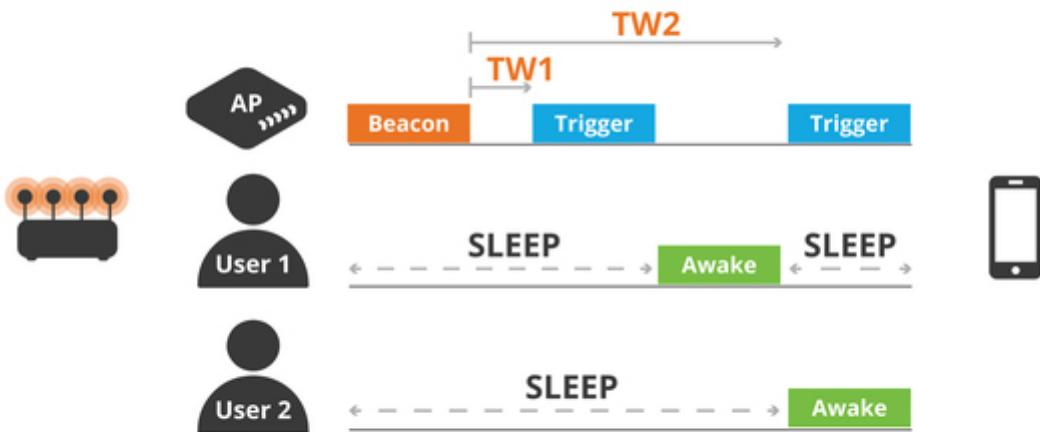

Target Wake Time (TWT)

[Source]

TWT enables devices to determine when and how frequently they will wake up to send or receive data. Essentially, this allows 802.11ax access points to effectively increase device sleep time and significantly conserve battery life, a feature that is particularly important for the IoT. In addition to saving power on the client device side, Target Wake Time enables wireless access points and devices to negotiate and define specific times to access the medium. This helps optimize spectral efficiency by reducing contention and overlap between users.

RESOURCE SCHEDULING SIGNIFICANTLY IMPROVES DEVICE BATTERY LIFE

TWT : Target Wake Time

- AP and devices negotiate and define a specific times to access the medium
- Reduced contention and overlap between users
- Significantly increases the device sleep time to reduce power consumption

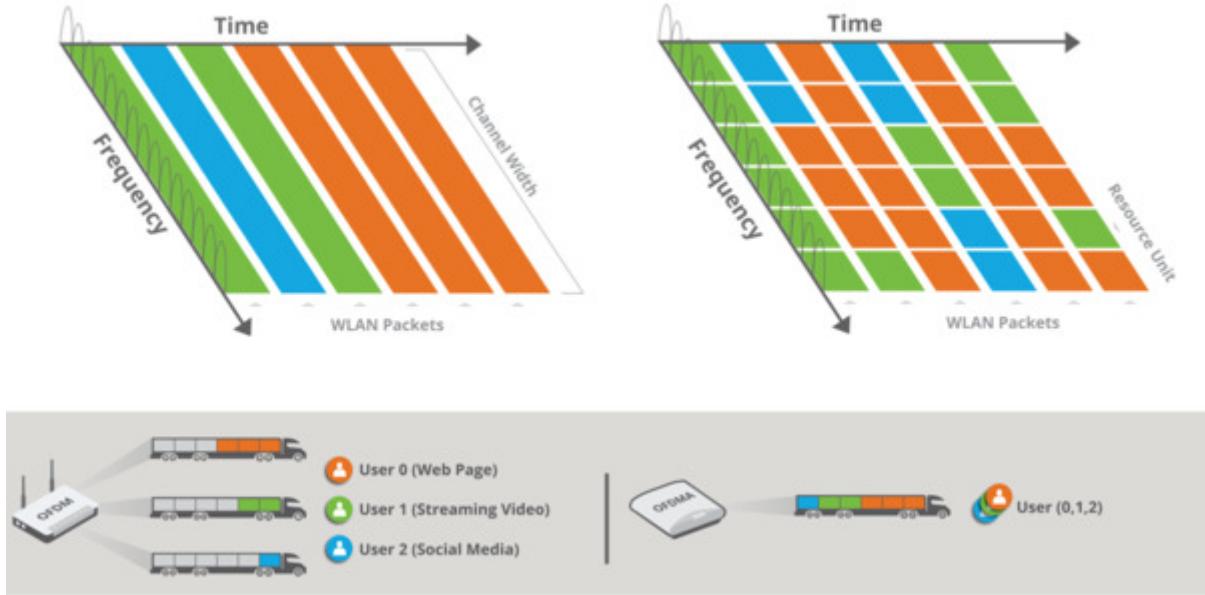

The Target Wake Time mechanism first appeared in the IEEE 802.11ah “Wi-Fi HaLow” standard. Published in 2017, the low-power standard is specifically designed to support the large-scale deployment of IoT infrastructure – such as stations and sensors – that intelligently coordinate signal sharing. The TWT feature further evolved with the IEEE 802.11ax standard, as stations and sensors are now only required to wake and communicate with the specific Beacon(s) transmitting instructions for the TWT Broadcast sessions they belong to. This allows the wireless IEEE 802.11ax standard to optimize power saving for many devices, with more reliable, deterministic and LTE-like performance. As Maddalena Nurchis and Boris Bellalta of the Universitat Pompeu Fabra in Barcelona noted in a recent paper, TWT also “opens the door” to fully maximizing new MU capabilities in 802.11ax by supporting the scheduling of both MU-DL and MU-UL transmissions. In addition, TWT can be used to collect information from stations, such as channel sounding and buffers occupancy in pre-defined periods. Last, but certainly not least, TWT can potentially help multiple WLANs in dense deployment scenarios reach consensus on non-overlapping schedules to further improve Overlapping Basic Service Set (OBSS) co-existence.

Orthogonal Frequency-Division Multiple Access (OFDMA)

[The Benefits of OFDMA for Wi-Fi 6](#) - A technology brief highlighting Qualcomm Technologies' competitive advantage

OFDM subdivides the Wi-Fi channel into smaller frequency allocations called resource units. By partitioning the channel, parallel transmissions of smaller frames to multiple users occur simultaneously. For example, a traditional 20 MHz channel might be partitioned into as many as nine smaller channels. Using OFDMA, a Wi-Fi 6 AP could simultaneously transmit smaller frames to nine Wi-Fi 6 clients.

The Wi-Fi Alliance Whitepaper further explains the difference between uplink and downlink OFDMA.

Uplink OFDMA is one of the key features introduced by Wi-Fi 6 and is among the most significant differences relative to 802.11ac. Uplink OFDMA allows data frames to be transmitted simultaneously by multiple stations. This amortizes preamble overhead and medium contention overhead, which leads to high aggregated network throughput. Uplink OFDMA can provide additional gains by permitting greater transmit power level per device, subject to regulatory requirements, and thus signal coverage on the uplink, since the transmit power of each client device can be concentrated on smaller allocated resource units.

Downlink OFDMA allows multiple data frames to be transmitted in a single data unit to multiple stations,

thus amortizing preamble overhead and medium contention overhead, leading to higher aggregated network throughput. Downlink OFDMA can further optimize aggregate throughput by balancing the allocation of power between users at high versus low signal-to-noise ratios, subject to total power constraints and regulatory requirements.

Multi-Link Operation (MLO)

Wi-Fi 6 devices can only connect to one band at a time, either 2.4 GHz or 5 GHz.

Wi-Fi 7 devices can use MLO to connect to multiple bands at once, including 2.4 GHz, 5 GHz, and 6 GHz.

MLO allows devices to send and receive data on multiple bands at the same time. This can help reduce latency and improve reliability. MLO can also be used for load balancing by switching between bands to minimize contention.

USB Pendrive

YUMI

[YUMI exFAT](#) - a Multiboot USB bootable software. Easily copy multiple ISO images to a bootable USB flash drive and select which ISO to load at boot

How to Restore USB flash drive using diskpart in Windows

[Source](#)

1. Open a command Prompt as administrator (**cmd.exe**)
2. Type **diskpart**
3. Next type **list disk**
4. Type **Select Disk X** (where **X** is the disk number of your drive).
5. Type **clean**
 * [If Error, See Note Below](#)
6. Next type **create partition primary**
7. Type **Format fs=exfat quick**
 Note: (for 32GB and smaller drives, use **fs=fat32**) instead.
8. Then type **active**
9. Next type **assign**
10. Finally, type **exit** to quit

Trend Micro Vision One Search Auto-Clicker Auto-Refresher

Use case

I need to auto-refresh the Trend Vision One Quarantine list every minute since they haven't added that into their platform. I tried using an auto-clicker / auto-refresh browser extension, but it would only hard refresh the page or click on anchor links via XPath, not buttons.

I eventually realized I could just write some JavaScript that would do the same thing. Below is the result. I found the buttonXpath is different depending on your browser, so if you use this in anything other than Chrome, you'll probably need to update that variable before using.

Code

```
# start the clicking

function clickButtonByXpath(xpathExpression) {
  try {
    const result = document.evaluate(xpathExpression, document, null,
XPathResult.FIRST_ORDERED_NODE_TYPE, null);
    const element = result.singleNodeValue;

    if (element) {
      element.click();
      console.log(`Button found and clicked: ${xpathExpression}`);
    } else {
      console.warn(`Button not found for XPath: ${xpathExpression}`);
    }
  } catch (error) {
    console.error(`Error clicking button via XPath: ${error}`);
  }
}

// Define the XPath expression for your button
```

```
const buttonXpath =  
'//*[@id="root"]/div[2]/div/div/main/div/div[2]/div/div[3]/div[2]/button'; // Replace with  
your actual XPath  
  
// Set an interval to call the function every 60 seconds (60000 milliseconds)  
const buttonClickInterval = setInterval(() => {  
    clickButtonByXpath(buttonXpath);  
, 60000);
```

```
# stop the button clicking  
clearInterval(buttonClickInterval);
```

-end
