

Batteries

Lithium Ion Voltage vs. Charge Status

[Original Source](#)

| | | |
|------|---|------|
| 4.2V | - | 100% |
| 4.1V | - | 87% |
| 4.0V | - | 75% |
| 3.9V | - | 55% |
| 3.8V | - | 30% |
| 3.5V | - | 0% |

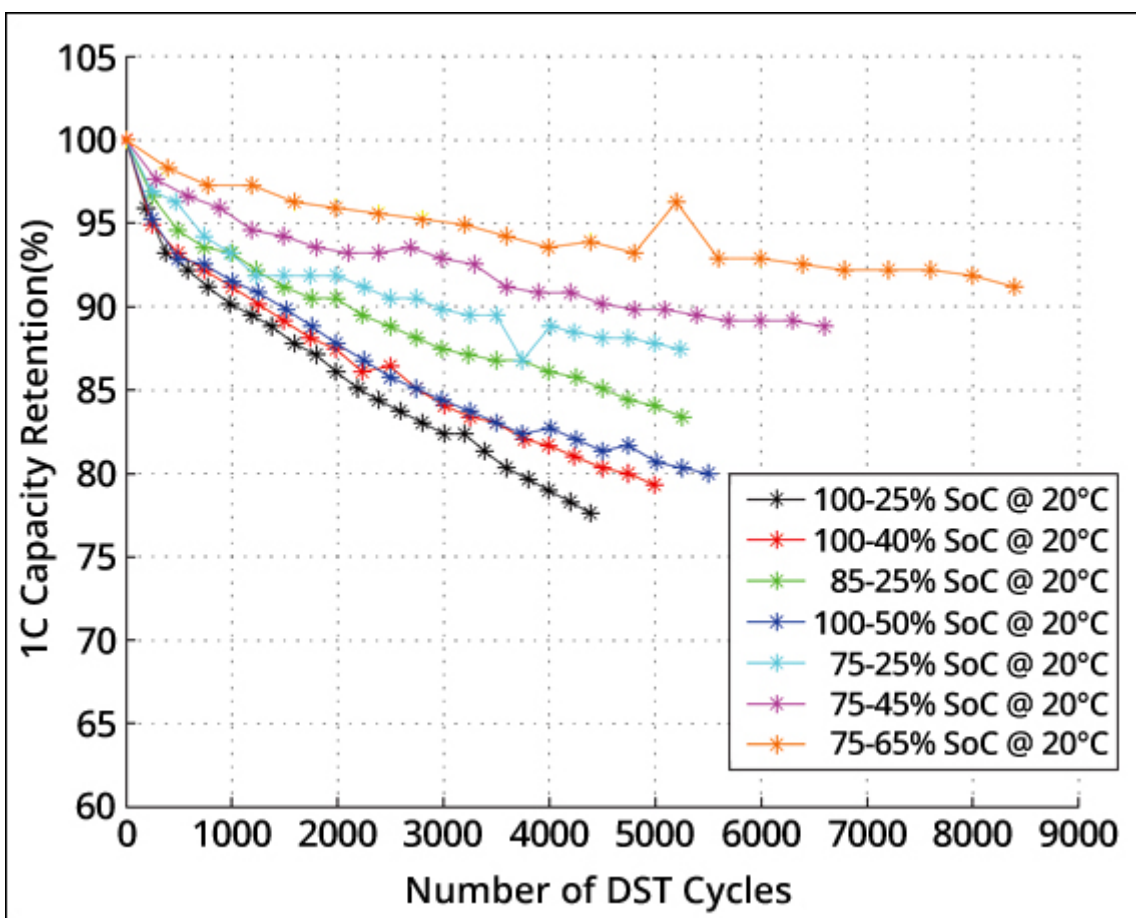

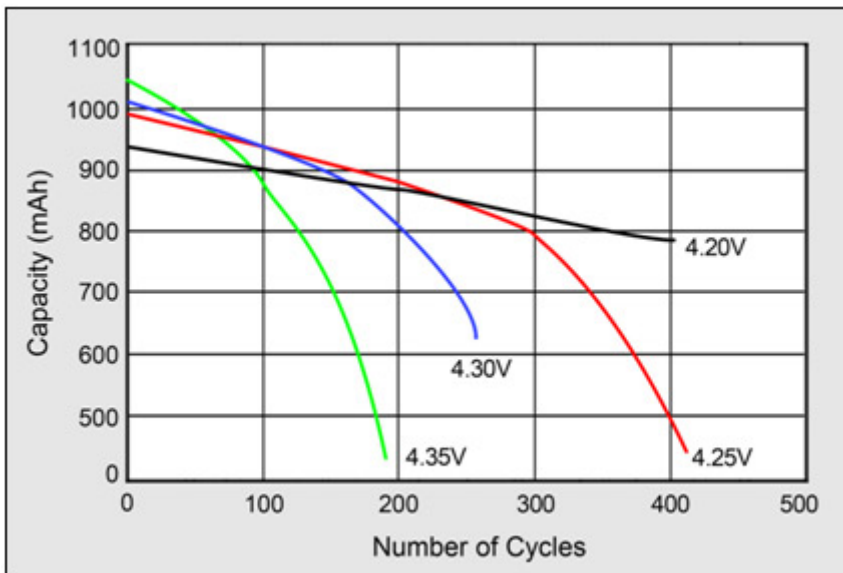

Somewhere in the 3.9V or slightly below area would be ideal for storage. Just don't overdo it. I believe AW batteries generally ship about 40% charge, or you can just discharge them in a light or other device, since that is easy and safe.

Battery University

Below are links to and summaries of some very informative Battery University articles.

BU-808: How to Prolong Lithium-based Batteries

[Original Source](#)

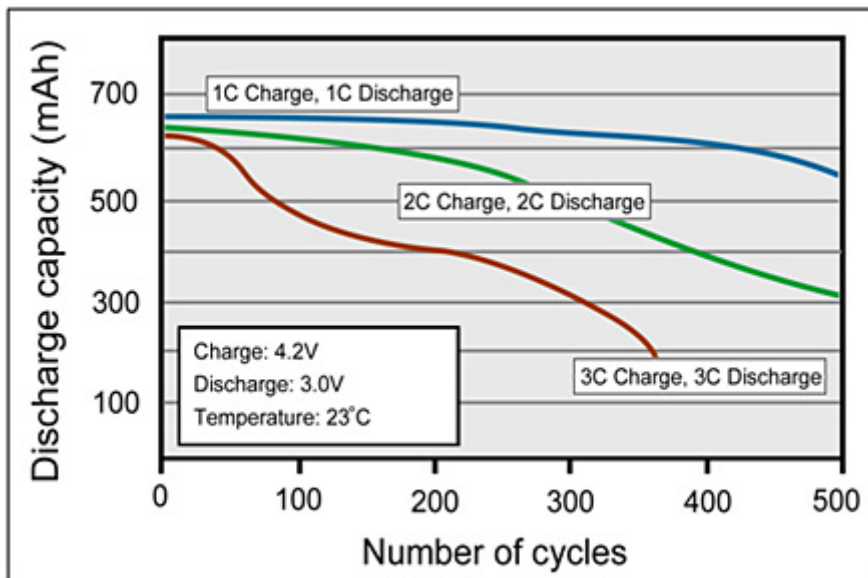

Summary:

- Environmental conditions, not cycling alone, govern the longevity of lithium-ion batteries. The worst situation is keeping a fully charged battery at elevated temperatures. Battery packs do not die suddenly, but the runtime gradually shortens as the capacity fades.
- Lower charge voltages prolong battery life and electric vehicles and satellites take advantage of this. Similar provisions could also be made for consumer devices, but these are seldom offered; planned obsolescence takes care of this.

- A laptop battery could be prolonged by lowering the charge voltage when connected to the AC grid. To make this feature user-friendly, a device should feature a “Long Life” mode that keeps the battery at 4.05V/cell and offers a SoC of about 80 percent. One hour before traveling, the user requests the “Full Capacity” mode to bring the charge to 4.20V/cell.

BU-401a: Fast and Ultra-fast Chargers

[Original Source](#)

Summary

- Charging and discharging Li-ion above 1C reduces service life. Use a slower charge and discharge if possible. This rule applies to most batteries.
- All batteries perform best at room temperature and with a moderate charge and discharge. Such a sheltered lifestyle does not always reflect real-world situations where a compact pack must be charged quickly and deliver high currents. Such typical applications are drones and remote control devices for hobbyists. Expect a short cycle life when a small pack must give all it has.
